Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DB

CC An antibody against the TRAIL receptor TRAIL-R3 of the invention.
CC An antibody against the TRAIL receptors is useful for detecting mammalian.
CC DAS or TRAIL-R3 proteins in a sample. Recombinant cells are useful in
CC bloassays for screening for (ant)agonists of DR5 or TRAIL-R3 proteins.
CC (Ant)agonists identified by the assay are useful for modulating the
CC related conditions which are treated in this way, include cancer
CC (e.g. lymphomas and carcinomas), autoimmune diseases (e.g. systemic lupus
CC (e.g. herpes virus, poxvirus and adenovirus), degenerative disorders
CC (e.g. Alzheimer's disease and Parkinson's disease), amyotrophic lateral
CC syndromes (e.g. aplastic anaemia) and ischaemic injury (e.g. myocardial
CC infarction and stroke). The polynucleotides can also be used to treat
CC used to form a composition that is useful for inhibiting expression of a

AAS21244-AAS21518 encode for novel human secretory and transmembrane CPRO polypeptides. The PRO polypeptides are useful to detect other CPRO polypeptides, to link bioactive molecules to cells expressing CPRO polypeptides, to modulate biological activities of cells expressing CPRO polypeptides, and to detect the presence of mammalian lung, colon, CD breast, prostate, rectal, cervical or liver tumours by comparing PRO CPRO polypeptide expression in a cell sample to that in a control sample. CC some of the 275 sequences are also useful to stimulate the release of CC tumour necrosis factor-alpha (TNF-alpha) from human blood, the CR proliferation or differentiation of chondrocytes, the proliferation or GC cartilage, the proliferation of inner ear utricular supporting cells or CC of T-lymphocytes, the release of a cytokine from peripheral blood CC monocytes (PBMCs), or the proliferation of endothelial cells. Some of the PRO polypeptides may modulate glucose or free fatty acid uptake by CC skeletal muscle cells or by adipocytes; or inhibit binding of A-peptide CC to factor VIIA. The PRO polypeptides can be used in assays to identify CC molecules involved in binding interactions. The polynucleotides encoding CC PRO polypeptides can be used to generate probes, antisense RNA/DNA, CC transgenic or knock out animals and can be used in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

also designated Apo-2DcR. The clone was obtained from a yeast screening of human breast carcinoma library cDNA. Apo-2DcR (27 kDa, pI 4.84) shows homology to apoptosis-linked receptors of the tumour necrosis factor receptor family, such as DR4 and Apo-2. The invention provides polynucleotides (see AAF30050-62) encoding novel human PRO proteins (see AAB20108-20) including PRO366. Claimed compositions comprising these proteins or their agonists are useful for increasing comprising these proteins or their agonists are useful for increasing

cc autoimmune thrombocytopaenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, demyelinated diseases (such as multiple sclerosis), autoimmune chronic active hepatitis, primary cc multiple sclerosis, granulomatous hepatitis, sclerosing cholangitis, cc inflammatory bowel disease (ulcerative colitis and Crohn's disease), cc quiten-sensitive enteropathy, Whipple's disease, (auto)immune-mediated cc skin diseases (such as bullous skin diseases, erythema multiforme and psoriasis), allergic diseases (such as asthma, allergic rhinitis, catopic dermatitis, food hypersensitivity and urticaria), immunologic cdiseases of the lung and transplantation associated diseases (such as graft rejection and graft-versus-host disease) (all claimed). Cc atopic dermation of diagnosing these disorders comprise detecting ct the level of expression of the PRO gene. Also claimed are a method cof identifying a compound capable of inhibiting the expression or cactivity of the PRO polypeptide, vectors, host cells, antibodies and a method of stimulating an immune response by administering
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                juvenile chronic arthritis, spondyloarthropathy, systemic sclerosis, idiopathic inflammatory myopathy, Sjogren's syndrome, systemic vasculitis, sarcoidosis, autoimmune haemolytic anaemia,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          increasing the proliferation of T-lymphocytes in a mammal in respons to an antigen. Claimed compositions comprising the PRO polypeptide or its antagonist have the opposite effect. A claimed method for treating an immune related disorder, such as a T cell disorder, involves administering the PRO polypeptide, an agonist antibody or an antagonist antibody. The disorder is selected from systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               stimulating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ating or enhancing an immune response in a mammal, sing the proliferation of T-lymphocytes in a mammal antigen. Claimed compositions comprising the PRO antagonist have the opposite effect. A claimed m

CC protein, PRO antibodies specific for a PRO protein, fusion proteins CC comprising a PRO protein, agonists or antagonists of a PRO protein, and CC compounds which inhibit the expression of a PRO gene. The invention CC additionally encompasses methods of identifying modulators of PRO CC angiogenic disorder, or a susceptibility to such a disorder by detecting CC angiogenic disorder, or a susceptibility to such a disorder by detecting CC angiogenic disorder, or a susceptibility to such a disorder by detecting CC angiogenist or antagonist; a retroviral gene therapy vector comprising a CC PRO nucleic acid; and methods of inhibiting or stimulating enothalial or angiogenist cell growth, cardiac hypertrophy or PRO induced angiogeness via the administration of a PRO protein, pro nucleic acids, pro proteins, antibodies against pro proteins, it cardiavascular, endothelial or angiogenist or antagonist therapeof. CC aponists and PRO antagonists may be used as therapeutic agents to treat CC cardiovascular, endothelial or angiogenic disorders, such as thereosclerosis, osteoporosis, myocardial infarction, hypertension, CC diabetic retinopathy, rheumatoid arthritis, Crohn's disease, psoriasis, C disease, or stroke. PRO nucleic acids are additionally useful in the recombinant production of PRO proteins, as hybridisation probes to soraer libraries to isolate cDNAs with sequence identity to PRO proteins, to analyse genetic disorders, and in gene therapy. PRO nucleic acids can also be used to produce transgenic content of the development and screening of potential contents. The present sequence represents a cDNA encoding a PRO protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

The PRO proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to novel human angiogenesis-associated pridesignated PRO proteins (AAB53064-B53097), and to nucleic acids PRO proteins. The invention also relates to vectors and host ce comprising a PRO nucleic acid, the recombinant production of a protein, PRO antibodies specific for a PRO protein, fusion protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 1102 BP; 269 A; 319

CC vector incorporating human breast carcinoma cDNA; isolation of CC yeast clones secreting amylase; PCR amplification (see AAV8419-50) CC of the insert directly from the yeast colony and purification of CC DNA for sequencing; use of an isolated sequence (DNA21705) as a CC probe to screen a human foetal lung library; and isolation of the CC full-length clone, which is deposited as ATCC 209087. An CC alternative translational initiation site encodes amino acid CC residues -40 to 259 of Apo-2DcR (see AAW88409). The invention CC provides vectors and host cells for recombinant production of CC apo-2DcR polypeptides, antibodies, and transgenic and knockout CC animals (useful e.g. for screening and developing drugs that protect CC against excessive apoptosis). Apo-2DcR, or chimeras comprising CC Apo-2DcR or its extracellular domain fused to a heterologous C claimed) and/or NF-KappaB activation by Apo-2 ligand, and may be C claimed) and/or NF-KappaB activation by Apo-2 ligand, and may be used in wivo or ex vivo for gene therapy. They can be used in CC methods for the modulation and diagnosis of apoptosis e.g. in cases of neurodegeneration, autoimmune diseases and inflammation. Most thuman tumour cells do not express Apo-2DcR transcripts, but normal C cancer cells by Apo-2 ligand, possibly by protecting normal, but concerned the cancerous, cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Ma

                                                                                          The present sequence encodes human tumour necrosis factor (TNF)-related apoptosis-inducing ligand (TRAIL) binding protein (BP). TRAIL-BP can be used for inhibiting the biological activities of TRAIL or for purifying TRAIL. TRAIL-BP proteins can be used for treating a TRAIL-mediated disorder such as T cell death in HIV-infected patients. They can be used for treating thrombotic dicroangiopathies such as thrombotic thrombocytopenic purpura, haemolytic-uraemic syndrome, clotting of small blood vessels or systemic lupus erythematosus. The TRAIL-BP nucleic acids can also be used for gene therapy. They can also be used carriers for delivering attached agents to cells bearing TRAIL.
                                                                                                                                                                                                                                                          New isolated TRAIL binding protein - which binds to a tunecrosis factor-related apoptosis inducing ligand, used diagnosis and treatment of TRAIL-mediated disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; TNF-related apoptosis-inducing ligand binding protein; clot TRAIL-BP; tumour necrosis factor; T cell death; HIV; gene therapy; thrombotic microangiopathy; thrombotic thrombocytopenic purpura;

TRID is a member of the tumour necrosis factor receptor (TNFR) family also known as TNFR-5. TRID is expressed in haematopoietic tissues and other normal human tissues. For a number of immune system-related disorders, substantially altered (whether increased or decreased) levels of TRID gene expression can be detected, therefore the TRID polypeptides, nucleic acids and antibodies are useful in the diagnosis of such immune system related disorders. Mutations of the TRID gene can also be detected. TRID can also be used to identify ligands which may be useful in the treatment of apoptosis related disorders. TRID is administered to humans at a parenteral dose of 0.01 to 1 mg/kg/day.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ebner
